Inabata Field Service certifies that this SX3100 automatic IC test handler has been fully audited and has been returned to the configuration as it was originally leased with the exception of any OEM recommended updates. It is the responsibility of the lessee to perform all OEM recommended field service updates prior to de-installation of this test system.

Inabata confirms that this test system is fully eligible for coverage under a continued maintenance contract once reinstalled.

Inabata also confirms that all links to the user's network have been removed from the handler computer to the extent that this handler is able to fully boot up in a standalone mode and execute and pass all OEM diagnostics tests.
